

2023

# Q2 REPORT

EOS Network  
Foundation

# Message from the CEO

The world is at a threshold. With the blockchain industry under assault by capricious regulatory uncertainty, many global financial centers are reorienting, repositioning, seeking clarity and stability. Markets like Hong Kong, Singapore, South Korea, Japan, and others, are laying the foundations of a multi-polar financial framework built on sensible and reliable policy. As this suitable terrain for innovation begins to take hold, profound new applications of blockchain technology will begin to emerge, forming an even more robust and secure layer of value in our dynamic global economy.

Unencumbered by the liabilities of tokenomic adventurism that have proved to be the ruin of many other blockchain projects, the EOS Network is remarkably well positioned in this emerging economy. EOS was launched by a decentralized community, battle-tested during five years of continuous operation, and now further advanced by centralized bodies born from within the community to serve the network, such as the EOS Network Foundation (ENF), as well as EOS Network Ventures (ENV). Under the careful stewardship of these entities, the capabilities and utility of the EOS Network continues to expand.

As an independent, free and open source blockchain ecosystem, EOS is now moving under its own power, development is once again on the upswing, and an increasing number of network participants are availing themselves of public goods funding opportunities through programs such as the ENF's Direct Grant Framework, and the quadratic crowdfunding platform, Pomelo. In addition, Antelope Coalition RFPs have funded the development of Wharfkit, a new set of web client SDKs geared to provide a much easier user experience while lightening the burden on application developers. At the same time, the highly anticipated release of Instant Finality is expected in Q4 with the upcoming hard fork to Leap 5.0., and will bring a great many new possibilities to the network.

As we continue working with coalition partners, further enriching the Web3 commons through our resolute commitment to free and open source development, we must also continuously strive to fortify our network's independence. Last September, the EOS community took action to assume responsibility for continued development and maintenance of the previously abandoned EOSIO codebase, giving rise to the community-led Antelope Protocol, and creating new possibilities for multiple networks in the process.

In the interests of EOS and the wider Web3 space, I believe it's essential that our community now moves to settle an important matter of accountability which bears directly on the question of network independence. After much deliberation and legal guidance, this past May I issued an open letter to the EOS community in which I appealed to EOS token holders who relied on Block.one (B1) promises when they purchased the initial ICO ERC-20 tokens, EOS tokens, or who deployed capital based on those promises—including a promise to invest \$1 billion into the EOS Network—to take action against B1.

In that letter I wrote: "EOS Network remains the most compelling utility token network in the crypto space. Taking steps to hold B1 to its promises of investment in EOS Network will only improve EOS Network's position and the long term value that EOS Network can bring to its participants." Since I issued this call, our legal team has received hundreds of inquiries from EOS token holders expressing their interest in joining a class-action lawsuit against B1. Additionally, we have been approached by litigation financing firms wanting to take on this case. I implore other similarly affected parties who have not yet expressed their interest, to reach out at [legal@eosnetwork.com](mailto:legal@eosnetwork.com).

By pursuing accountability from B1, we are not only seeking justice for broken promises, but also paving the way for a stronger and more independent network. We intend to send a powerful message to the world that the EOS Network, and by extension all of Web3, can defend itself against corporate interests that seek to extract value from decentralized networks through misleading and fraudulent means.

While the EOS Network mobilizes to hold B1 to account in what will certainly be a long process, we are not standing idly by. In Q2 we continued to prioritize the rise of our

industry leading free and open source EOS EVM. With both advantages in performance and financial incentives for businesses to deploy their dApps, as well as assistance in the form of business development, marketing, and investment for qualifying projects, there are a wealth of new opportunities available.

Through these efforts, the EOS EVM ecosystem is experiencing a surge of interested developers and dApps, creating a challenge to keep up with the rapid growth. With numerous listings and resources constantly being added, the ecosystem is coming to life before our eyes. Currently 12+ wallets are supporting the EOS EVM, and more are being added regularly. With the recent upgrade to EOS EVM v0.5.0, we have also introduced the capacity for extending our Yield+ liquidity program to the EOS EVM.

As we continue providing support for the EOS EVM, we are extending the economic activity of EOS itself. While building bridges between our ecosystem and previously inaccessible communities, we are facilitating new synergies in an increasingly multichain world.

In Q1 the ENV made a formal commitment to deploy \$20M directly into EOS EVM & GameFi projects, and in mid June it was announced that EOS Network Ventures (ENV) had been legally established as a Cayman Islands Foundation. A transfer of approximately 22.7 million EOS tokens from eosio.fund to envvenvenv signaled the creation of EOS Network Ventures Fund I, and the first round of ENV investments is now underway.

The ENV is actively pursuing strategic partnerships with other venture capital funds (VCs) as part of ENV initiatives, and has already established two partnerships with different VCs. Despite the current downturn in the market, the ENV is prepared to make its initial investments and is diligently evaluating and negotiating with DEX platforms and projects for the benefit of all token holders.

Beyond capital investment, it is the investment we continue to make in our community that is now beginning to bear fruit. We are making great strides towards development of the tools that will abstract away the raw complexity of the

performant and flexible EOS Network, and we are poised to greatly improve the user experience on EOS. Our work to position EOS as the preferred blockchain for developers continues, and our goal is nothing less than achieving mass adoption. I envision a future, already evident in the seamless user experience of projects such as the metaverse super app, Upland, where blockchain based applications are transformed into accessible and integral aspects of everyday life.

Our community's determination, our willingness to repeatedly confront and overcome challenges, to take our destiny in our own hands and to contribute to the most legendary comeback in blockchain history, speaks to the quality of individuals gathered here. The joke in EOS has always been, "we're in it for the tech." And while the tech is truly astonishing, it is the resilience of our multifaceted, multinational, multicultural community that is breathing life back into EOS. I'm in it for that.

Stand with us. Stand with the EOS community as we claw back power from corporate interests that have so cynically manipulated and profited from those who believed in, and fought for, a vision of integrity, transparency, and decentralization, only to be betrayed again and again. The EOS community is on the move. Join us.

In solidarity,

**Yves La Rose**

## **Mission of the EOS Network Foundation**

The EOS Network Foundation is the hub of collaboration and development on the EOS Network.

Our mission is to enable developers, businesses and individuals to build innovative solutions on EOS. The EOS Network Foundation (ENF) provides support, funds and the coordination of resources necessary to make EOS a thriving ecosystem. We harness the power of decentralization to chart a coordinated future for the EOS Network as a force for positive global change.

Through direct investments, a grant framework, sponsored working groups, and Pomelo, the ENF takes a multi-pronged strategic approach towards funding. We enable the EOS community to create positive sum games to mature EOS into a best-in-class Web3 smart contract platform and blockchain ecosystem.

## Overview of Q2

The second quarter of 2023 has seen a lot of growth for the EOS ecosystem, despite the limitations caused by macroeconomic conditions. The EOS Network Foundation (ENF) continues to work diligently for all network stakeholders and ecosystem contributors. Over the past three months, there have been a number of critical technical releases, notable partnerships, impactful events and other major milestones that have continued to raise the profile of EOS around the world.

Celebrations were in order for [the five year anniversary of the EOS mainnet](#), with zero downtime for over 1,800 consecutive days. This event happened weeks after another important ecosystem development, [the launch of the EOS EVM mainnet](#). Shortly after the launch of EOS EVM, the ecosystem saw [an influx in applications deploying](#), along with an increase in interest from developers, potential partners and ecosystem contributors.

The focus on EVM-compatibility did not slow down work on the native layer either. EOS native underwent a major upgrade with the release of [Antelope Leap v4.0.0](#) in the same month that EOS EVM was launched. Alongside the infrastructure upgrades, capital has continued to be deployed through funding avenues like the ENF Grant Framework and Pomelo providing builders with the resources they need to begin developing on EOS.

EOS also received coverage from a number of notable media outlets in Q2, including [Bloomberg](#), [CoinDesk](#), [Cointelegraph](#), [Altcoin Daily](#) and [Real Vision](#). The growing awareness for #TheNewEOS has led to [renewed collaborations with long-time partners like Binance](#), as well as new interest from major industry players. A notable example was the [\\$60M strategic partnership with DWF Labs](#), that is set to unlock new vectors of growth for the network.

These are just a handful of the many achievements that the EOS Network saw in the second quarter of 2023, under the stewardship of the EOS Network Foundation. Many more are covered within the pages of this report. As the ecosystem looks towards another season of exciting growth in Q3, it's important to recognize the dedicated work from contributors and community members across the entire EOS ecosystem that is making all of this possible.

# Five Years of Community, Performance and Resilience

On June 8th 2023, the EOS community celebrated the five year anniversary of the EOS Network. With an impressive track record of 1,800+ consecutive days without any downtime, EOS has proven itself to be a reliable, highly performant ecosystem for Web3 projects. This is a particularly notable milestone for the community, as they look back on the massive amount of growth and technical developments that the EOS ecosystem has seen since the founding of the EOS Network Foundation.

On top of its technical accomplishments, EOS also has a vibrant community that exemplifies the core values that attract vibrant and hopeful human beings to the Web3 space. Values such as the desire for independence, the preference for collaboration, and the ability for a community to unite and build together are ever-present in the EOS community.

To celebrate this momentous occasion, the [gems team](#) released a limited edition NFT collection, commemorating some of the most memorable EOS highlights from the past five years. The celebrations concluded in an epic NFT opening ceremony on the weekly EOS Fireside Chat. Watch [the replay of the event here](#), then check out [the full update celebrating the milestone](#) on the ENF Blog. Thank you to all EOS community members and ecosystem contributors for their dedicated work supporting the growth of EOS over the past five years.

# EOS EVM Updates & Ecosystem Growth

The [EOS EVM](#) is an emulation of the Ethereum network's EVM, housed within an EOS smart contract. It offers feature parity to other EVMs in the space but with unmatched speed, performance and compatibility. It has quickly become a key piece of infrastructure for the ecosystem ever since [its launch on April 13, 2023](#).

Even in the early days of being live, the EOS EVM has proven to be a valuable piece of infrastructure for developers interested in taking advantage of EOS, with 12 new applications launching in the first week alone. From an economic standpoint, the EVM has also begun to drive value back to the network, with EOS EVM gas fees generating just as much revenue for the network as other network functions.

Additionally, the EOS EVM will no doubt serve as an important vector for user adoption. Currently, there are at least 12 new wallets that can be leveraged to interface with the EVM, making it easier for users in other ecosystems to begin engaging with the EOS Network.

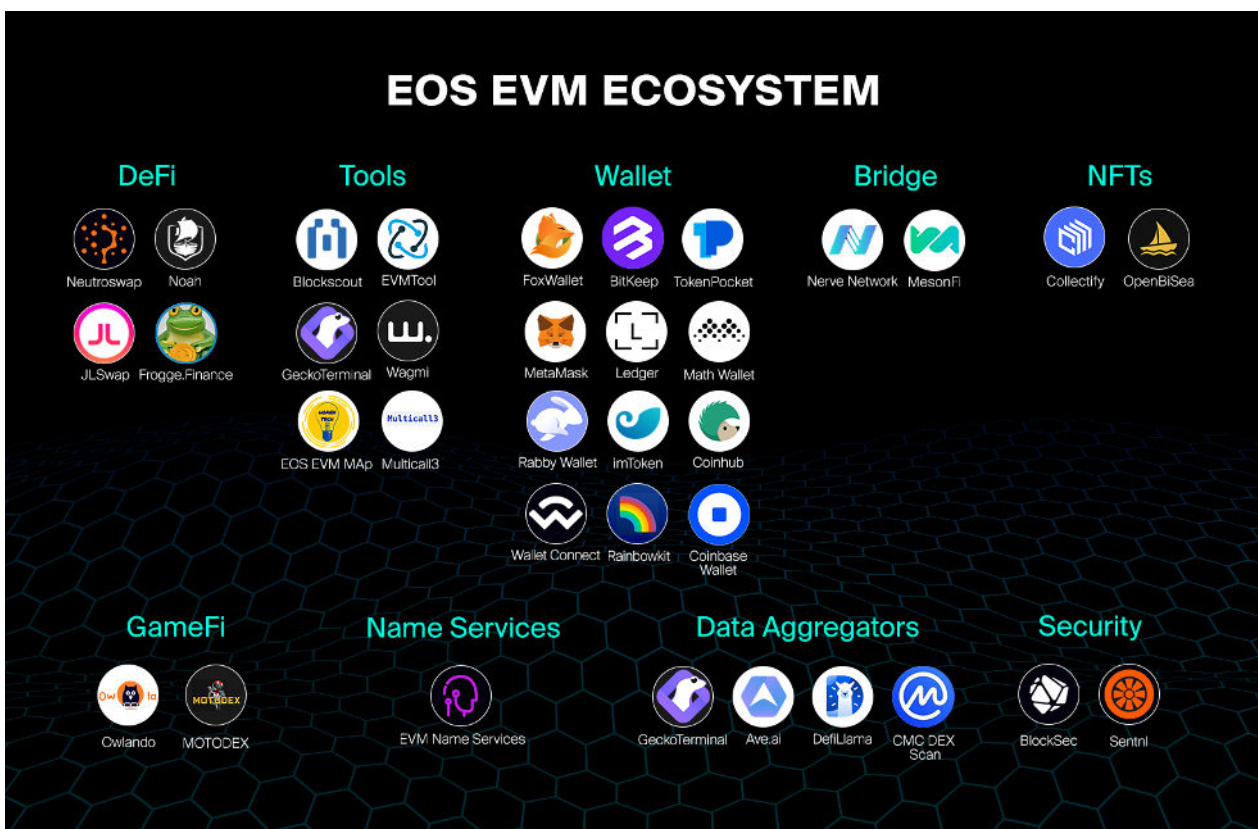

In late April, [the EOS EVM was open sourced](#), making it accessible to other builders and networks in the Antelope ecosystem. This aligned with a key pillar of the ENF's mandate, to foster an open collaborative environment for innovation across the EOS Network. Learn more about the ENF's [open source and transparency efforts here](#).

Only 6 weeks after the launch of EOS EVM, the ENF engineers [released the code for EOS EVM v0.5.0-rc1](#), the first major upgrade for the EVM. This release spoke to the rapid pace of development that the EOS Network has seen since the launch of the EOS Network Foundation. It brought critical updates to the EOS EVM, enhancing performance and user experience, while adding several new feature improvements.

The most notable of these improvements was the incorporation of the [Yield+](#) liquidity program on the EOS EVM side of the protocol, this will bring liquidity benefits to dApps on the EOS EVM and new yield farming opportunities to DeFi traders in the EOS ecosystem. Shortly after the release of EOS EVM v0.5.0-rc1, [the ENF engineers deployed EOS EVM](#)

[v0.5.0](#) on the EOS mainnet.

The ENF business development and ecosystem growth team have been working to deploy [additional incentives](#) for dApps integrating the EOS EVM, in addition to the funding made available through funding buckets such as [Pomelo](#) and the [ENF Grant Framework](#). The DeFi ecosystem in particular has seen a significant increase in activity from both developers and users, with [a full overview available in this update](#). The following EOS EVM Ecosystem Overview provides a high level look at all the dApps that have deployed on the EOS EVM since it launched.

## **Notable Partnerships**

EOS received recognition from a number of notable partners during Q2. This reflects the growing awareness and credibility of EOS as a leading L1 solution in the Web3 industry.

### **DWF Labs: \$60M Strategic Partnership**

In April, DWF Labs [announced a strategic partnership with the EOS Network Foundation](#), to accelerate the growth and adoption of the EOS Network. The partnership involved a \$45m EOS token purchase agreement and a \$15m commitment to invest into EOS-based businesses and projects. DWF Labs is a global digital asset market maker and multi-stage Web3 investment firm that has emerged as one of the most active investors during the crypto bear market.

The synergy between DWF Labs and EOS is set to unlock new potential in the blockchain ecosystem and the world of web3. The partnership will bring together their respective expertise and resources, ensuring a thriving and fruitful future for the EOS Network.

### **Wombat X Accelerator**

In May, the Wombat project unveiled [Wombat X](#), an accelerator program aimed at supporting Web3 games and initiatives. Through Wombat X, class participants have access to cutting-edge gamedev software, a huge user base and all-round support from a team of industry advisors. The EOS Network Foundation is excited to be [amongst the founding partners](#), pushing the boundaries of GameFi innovation on EOS.

## Developer Relations

The ENF Developer Relations department continued efforts to grow awareness for the EOS ecosystem with developers across the industry. Q2 saw a number of updates and new guides being added to the [EOS Documentation](#), along with new video content being integrated into the [EOS Learn & Earn portal](#).

The ENF also partnered with Upland on a [hackathon through the month of May](#), encouraging game developers to begin exploring GameFi opportunities on EOS. Most notably, the ENF Developer Relations team [ran a webinar](#) in partnership with [Zaisan](#), introducing the EOS EVM. The webinar served as an onboarding tool and a valuable resource for developers interested in getting started on the EOS EVM. [Watch the webinar recording here](#).

## **Additional Milestones & Ecosystem News**

The information covered in this report represents only a fraction of the growth that the ecosystem underwent in the second quarter of 2023. There are countless contributions and milestones that have been achieved by contributors around the world, all working to push EOS to the forefront of Web3 innovation. Below are some additional highlights from Q2 that the ENF is following. There are no doubt many more that did not make it into this document.

### **Legal Action Against B1 Continues**

[Legal efforts continue](#) from the EOS community, to hold B1 to its promises of investment in the EOS Network. ENF CEO, Yves La Rose, released a [Letter from the CEO](#) on the topic, with a [statement](#) that “if enough token holders are interested in making a legal claim, the EOS Network Foundation is prepared to assist in bringing EOS token holders together for the purpose of advancing a claim against B1.” Parties interested in supporting this initiative can reach out to: [legal@eosnetwork.com](mailto:legal@eosnetwork.com).

### **WordProof Integrates Shopify**

WordProof, a tool that allows online publishers to timestamp content to the EOS blockchain, [announced a collaboration with Shopify](#), a leading ecommerce platform. This integration will allow Shopify website owners to seamlessly timestamp their webpages to the EOS blockchain, without leaving the Shopify application. This enhances trust, transparency, and security for both businesses and consumers, while increasing activity on EOS and demand for blockspace. [Read more about how the WordProof platform leverages EOS](#), enabling content producers to interact with EOS in an extremely user friendly way.

## **Hypha DAO Releases Waitlist for Beta Program**

ENF Grant recipient, [Hypha DAO](#), reached a major milestone for their project, [opening up the waitlist](#) for their innovative “Organization in-a-box” solution. Hypha DAO is a powerful tool, built to enable the next generation of DAOs on EOS. It provides teams with the resources to organize and operate businesses, communities, and even entire economies in ways that are more democratic, transparent, and decentralized than today’s existing structures. Check out [this deep dive](#) to learn more about some of the most unique features that Hypha DAO has to offer.

# EOS in the News

Awareness for EOS grew through the second quarter of 2023, with coverage by popular Tier 1 & Tier 2 publications. Below are some of the most notable features, with [many more](#) that did not make it into this report.

# Events

The EOS Network Foundation events team has been working to raise awareness for the EOS community at events around the world and online. The most notable event in Q2 was the [ENFs presence at Consensus 2023](#), which involved a [Welcome to Consensus side-event](#), hosted by the ENF. The event featured a panel highlighting ecosystem partners and welcomed nearly 100 attendees and EOS community members. Read more about each event in the links below and head to the [events page on the ENF website](#) to find details on upcoming events.

## In Person Events

- [Foresight 2023 Hong Kong Web3 Summit](#) - April 10
- [Web3 Festival Hong Kong](#) - April 12 - 15
- [Consensus 2023 by CoinDesk](#) - April 25 - 28
- [Welcome to Consensus Side Event](#) - April 25
- [Upland Genesis Week & Hackathon](#) - June 8 - 9
- [3XP Web3 Gaming Expo](#) - June 8 - 9

## Ecosystem Partners

The ENF is grateful to have a robust ecosystem of partners and community contributors all working to grow the EOS Network. Partners working with the ENF in Q2 include.

## Direct Grant Framework

The ENF empowers developers, businesses, and individuals who wish to build on EOS. The ENF Grant Framework is open to individuals, small teams, and companies, with grants scaled to fit the scope of each initiative. All forms of projects are encouraged to apply for Grants. During Quarter 2, the following grants were approved through the grant framework:

- **Alphaday** : a crypto workflow aggregator that pulls in news, on-chain data, social media, Web3 services & much more into a customizable UI. [Read More](#)
- **Antelope Firewall** : a proxy that would be used in node operator infrastructure, with goal of lowering the barrier to entry for infrastructure providers, offering highly reliable public endpoints. [Read More](#)
- **FACINGS NFT Collection Manager - Stage 2** : After completing Stage 1 in Q1, this project entered Stage 2, with the goal of creating a developer friendly ecosystem for extending the core collection-manager app. [Read More](#)
- **EOS Vision** : A project with the mission to promote the adoption of EOS by creating & promoting content of interest on Reddit & Facebook. [Read More](#)

Since launching the direct grant framework, the platform has received 89 applications. Of these 89 applications, 18 milestone-driven grant applications have been approved, 4 of which have been completed. Across these applications, a total of \$877,915.57 has been committed to contributors in the EOS ecosystem, pending milestone completion. \$354,650.60 has been paid out so far.

# Pomelo

Pomelo is an open-source crowdfunding platform that funds EOS-based projects qualifying as a public good. It uses a quadratic funding to distribute more funds from the matching pool to projects that have the most community support. In Q2, [the ENF donated \\$158k](#) to the matching pool for Season 6 of Pomelo. This took advantage of the new [multi-pool feature](#), with dedicated funding rounds for GameFi, EOS EVM and the broader EOS ecosystem. [Learn more about public goods funding on EOS and Pomelo](#), then check out the stats from Pomelo Season 5 below.

# Technical Development

In addition to the work developing the EOS EVM, the ENF's engineering team has continued their dedicated work in maintaining the core protocol. Below are some of the biggest highlights from Q2

## EOS EVM v0.5.0

As previously noted in this report, the release of EOS EVM v0.5.0 was a crucial update for the EVM ecosystem on EOS. In addition to enabling the functionality to enable [Yield+](#) for EVM-based DeFi applications, it also included a number of technical improvements such as:

- Adding read-only transaction execution support to the EVM contract
- Removing advanced execution to increase nested call level
- Configurable permission enabled in tx\_wrapper
- And more

Read the [announcement of here](#) and check out the [EOS v0.5.0 release notes](#) for more information.

## Antelope Leap v4.0.0

The core protocol of EOS, Antelope Leap, underwent a number of upgrades to improve speed, scalability, reliability and performance, throughout the second quarter of 2023. The most notable update was Leap v4.0.0, which included features such as:

- Higher performance with multi-threading features
- Reduced latency and faster block propagation
- More control and visibility around state and history data

Read the full announcement for [Antelope Leap v4.0.0 here](#), then [check out the release notes](#) for more information.

## **CDT v4.0.0**

Contract Development Toolkit (CDT) is a C/C++ toolchain targeting WebAssembly (WASM) and a set of tools to facilitate development of smart contracts written in C/C++ that are meant to be deployed to an Antelope blockchain. The release of CDT v4.0.0 includes a new project manager utility “antler-proj”, additional crypto extensions for crypto primitives host functions, and several bug fixes. Read the full [CDT v4.0.0 release notes here](#).

## Antelope Coalition

The Antelope Coalition is the working group tasked with funding, organizing, and prioritizing the future of the Antelope software, led by members of EOS, Telos, WAX, and UX Network. Work continued steadily throughout the second quarter of 2023, with regular updates being shared through the Antelope Coalition [meeting recordings](#).

### Antelope IBC Live

In May, the WAX blockchain [completed the integration of Antelope IBC](#). As the final network within the Antelope Coalition to integrate IBC, this milestone marked the start of IBC being fully accessible across the entire Antelope ecosystem.

Utilizing this tool, Antelope blockchains can reach consensus on the state of assets across other networks in the ecosystem, without the need for third-party bridges or oracles. This enables functions such as cross-chain bridging and horizontal scaling, in a way that is much more secure and immutable than other solutions on the market. Read more about the power of Antelope IBC in [this deep dive](#).

### Wharfkit Updates

Wharfkit is a Web Client SDK being developed by [Greymass](#) and funded by blockchains within the Antelope Coalition. Q2 saw a lot of progress in this initiative including:

- The release of plugins both for Anchor and for transaction finality.
- Introducing localization
- UI and UX improvements
- Session Kit 0.5 release
- Documentation updates
- Work on the Contract Kit
- Updates to [Wharfkit.com](#)
- And more

More details on the work that's been progressing with this initiative can be found on the [Wharffit Website](#) and the [Greymass Medium](#).

## **Antelope Marketing Working Group**

The Antelope marketing working group met regularly throughout the second quarter, with marketing representatives from each network aligning on the rollout of Leap v4.0.0 and messaging around Antelope IBC going live on all chains. The group also began work generating new content for the [Antelope website](#) and is planning for some high-level updates to the website. Some of this content is expected to go live in Q3.

# ENF Operations and Financial Overview

## ENF Overall Spending

### Q2 2023 Total Spending

**\$5,663,336**

## Roadmap

### Q3

- Instant Finality Testnet Deployments
- Wharfkit SDK Contract Kit & Account Kit
- RAM Limitations Research
- EVM Name Service Key Systems and Deployment
- P2P Peer Discovery Development
- Antelope Firewall Prototype
- CDT 5.0.0 Release Final
- FACINGS NFT Collection Manager UX & Core Plugins
- FACINGS NFT Collection Manager Data Import Plugin
- Hypha DAO Notifications & Payroll Modules
- EOS Network Ventures Funding
- Pomelo Bounties
- Pomelo Season 7

### Q4

- Leap 5.0.0
- Instant Finality Audit
- Instant Finality Deployment Period Begins
- Wharfkit SDK Website, Documentation & Portal Doc Work
- Integration of IBC & Instant Finality
- EVM Name Service Testing & Deployment
- EOS Network Ecosystem Dashboard Maintenance
- P2P Peer Discovery Maintenance
- FACINGS NFT Collection Manager Airdrop Plugin
- NFT Collection Manager Airdrop
- Antelope Firewall MVP
- EOS Network Ventures Funding
- Pomelo Season 8
